## HF-Dex® Analysis for Heart Failure

The HF-Dex scale is a tool to assist in monitoring fluid status in patients with heart failure who have fluid management problems, and should be used in conjunction with other clinical data. HF-Dex values in the light blue reference range are consistent with normal fluid volumes, based on data collected from generally healthy individuals with normal fluid levels. Values in the medium blue and dark blue reference range may indicate increasing levels of extracellular fluid and may require additional clinical investigation. Values in the gray range require additional investigation.

Total Body Water (TBW)	LITERS	% WEIGHT
Current	<b>27.4</b>	<b>47.9</b>
Change from Previous	<b>-0.9</b>	<b>-0.9</b>
Baseline	<b>28.2</b>	<b>48.2</b>
Change from Baseline	<b>-0.8</b>	<b>-0.3</b>

Extracellular Fluid (ECF)	LITERS	% TBW
